MBA Core Accounting Project 2: Accounting Learning Game

Project Overview

In this project, student teams will design and create an interactive, web-based game that teaches an accounting concept relevant to MBA students. The objective is to deepen your own understanding of accounting by translating course material into an engaging and effective learning experience for future cohorts.

The assignment emphasizes accounting accuracy, instructional effectiveness, creativity, and usability rather than technical coding expertise. Students may use AI-assisted tools, no-code platforms, or any development approach of their choice.

Team Structure

- Teams of 3–4 students
- One game per team
- Designed for future MBA student use (individual or team-based play)
- All team members are expected to contribute meaningfully

Topic Selection

Teams may choose any accounting topic relevant to MBA Core Accounting. Examples include, but are not limited to: financial statements, financial statement analysis, cost behavior, break-even analysis, budgeting, variance analysis, revenue recognition, inventory, managerial decision-making, etc. The selected topic must be accurate, clearly explained, and appropriate for learners with limited accounting backgrounds.

Game Design Requirements

Your game must:

- Be web-based and accessible via link
- Function on PC, Mac, and mobile devices
- Clearly state learning objectives at the beginning
- Include feedback and explanations for incorrect answers
- Be intuitive and easy to navigate
- Avoid copyrighted images or proprietary assets
- Cite any external sources used

Game format is flexible (quiz, simulation, role-play, scenario-based, competitive challenge, etc.). Completion time is flexible but should be reasonable for classroom or study use. If you choose a longer format (e.g., RPG), there need to be milestones built in that facilitate an evaluation withing a reasonable time.

Deliverables

- Link to completed web-based game (team submission)
- Peer evaluations of assigned games (individual submission)

Grading Structure

Total: 25 points (5% of course grade)

Grading is 100% based on structured peer evaluation, subject to audit and adjustment by the instructor

Peer Evaluation

Intentional grade generosity is expected. This assignment is designed to reward thoughtful engagement. Peers should evaluate seriously (so submission will be perfect), but high-quality effort should receive strong scores.

Rubric (25 Points Total)

- Accounting Accuracy (8 points)
  - Concepts are correct and clearly explained
  - No material accounting errors
- Teaching Effectiveness (6 points)
  - Learning objectives are clear
  - Explanations improve understanding
  - Feedback for incorrect answers is helpful
- Engagement & Creativity (4 points)
  - Game design is thoughtful and engaging
  - Format enhances learning
- Usability & Professionalism (4 points)
  - Easy to navigate
  - Mobile-friendly
  - Organized and polished
- Overall Value for Future Students (3 points)
  - Would this be genuinely useful for future MBA cohorts?

<u>Overall Comments:</u>

- Strongest aspect of the game
- One suggestion for improvement

Reminder: Evaluate responsibly but generously. The goal is constructive assessment.
